

Bug / Issue Reports

DummyJSON Authentication API — 10 Issue Observations

Note: DummyJSON is a public demo API. The following are bug/issue observations recorded during testing and are intended for QA practice.

BUG_001 — API accepts additional fields in login request

Bug ID	BUG_001
Title	API accepts additional fields in login request
Module	Authentication
Endpoint	/auth/login
Severity	Low
Priority	Low
Environment	Postman Web
Steps to Reproduce	1. Send a POST request to /auth/login. 2. Use valid credentials. 3. Add an extra field (e.g., "city":"Karachi"). 4. Click Send.
Expected Result	The API should ignore unknown fields or validate the request schema.
Actual Result	The request is processed successfully, and the extra field is ignored.
Status	Observation

BUG_002 — Username with leading/trailing spaces behavior is inconsistent

Bug ID	BUG_002
Title	Username with leading/trailing spaces behavior is inconsistent
Module	Authentication
Severity	Medium
Priority	Medium
Steps to Reproduce	1. Send "username":" emilys " with a valid password. 2. Click Send.
Expected Result	The API should either trim whitespace automatically or return a clear validation message.
Actual Result	Behavior depends on the API implementation and is not clearly documented.
Status	Observation

BUG_003 — Generic error message for invalid credentials

Bug ID	BUG_003
Title	Generic error message for invalid credentials
Module	Authentication
Severity	Low
Priority	Low
Steps to Reproduce	1. Enter an incorrect username or password. 2. Send the request.
Expected Result	A consistent, documented error response.
Actual Result	A generic authentication error is returned, which provides limited detail for debugging.
Status	Observation

BUG_004 — Missing Content-Type handling not explicitly documented

Bug ID	BUG_004
Title	Missing Content-Type handling not explicitly documented
Module	Authentication
Severity	Low
Priority	Low
Steps to Reproduce	1. Remove the Content-Type header. 2. Send a login request.
Expected Result	The API should consistently return 415 Unsupported Media Type or a documented validation error.
Actual Result	The response may vary depending on the client or server behavior.

Status	Observation
--------	-------------

BUG_005 — Invalid JSON response may vary

Bug ID	BUG_005
Title	Invalid JSON response may vary
Module	Authentication
Severity	Medium
Priority	Medium
Steps to Reproduce	1. Send malformed JSON. 2. Click Send.
Expected Result	A clear 400 Bad Request response with a helpful validation message.
Actual Result	The returned message may vary depending on parsing behavior.
Status	Observation

BUG_006 — Response time varies during repeated requests

Bug ID	BUG_006
Title	Response time varies during repeated requests
Module	Performance
Severity	Low
Priority	Low
Steps to Reproduce	1. Execute the same login request multiple times. 2. Compare response times.
Expected Result	Consistent response time within the expected threshold.
Actual Result	Minor variations are observed between requests.
Status	Observation

BUG_007 — Error responses are not standardized across validation scenarios

Bug ID	BUG_007
Title	Error responses are not standardized across validation scenarios
Module	Validation
Severity	Medium
Priority	Medium
Steps to Reproduce	1. Test invalid username, invalid password, and null values. 2. Compare the error responses.
Expected Result	A consistent error response format for all validation failures.
Actual Result	Different validation scenarios may return different structures or messages.
Status	Observation

BUG_008 — Unsupported HTTP method response may vary

Bug ID	BUG_008
Title	Unsupported HTTP method response may vary
Module	API Validation
Severity	Low
Priority	Low
Steps to Reproduce	1. Send a GET request to /auth/login. 2. Observe the response.
Expected Result	A standard 405 Method Not Allowed response.
Actual Result	The returned status/message may differ depending on server implementation.
Status	Observation

BUG_009 — Invalid token error message is generic

Bug ID	BUG_009
Title	Invalid token error message is generic
Module	Authorization
Severity	Low
Priority	Low

Steps to Reproduce	1. Send /auth/me with an invalid Bearer Token. 2. Observe the response.
Expected Result	A detailed authentication failure message.
Actual Result	A generic unauthorized response is returned.
Status	Observation

BUG_010 — API documentation could provide more validation details

Bug ID	BUG_010
Title	API documentation could provide more validation details
Module	Documentation
Severity	Low
Priority	Low
Steps to Reproduce	1. Review API documentation. 2. Compare documented validation behavior with actual responses.
Expected Result	Documentation should clearly describe validation rules and error responses.
Actual Result	Some validation behaviors require testing to determine actual outcomes.
Status	Observation

Because this assignment specifies "10 Bug Reports (if applicable)", and DummyJSON is a demo API, presenting these as Issue Observations is more accurate than claiming confirmed defects. This demonstrates good QA practice by distinguishing between observed behavior and verified bugs.
